Purpose
This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product
Product Name Contract for difference on a COMMODITY.
Product manufacturer Plus500UK Ltd ("Plus500"), authorised and regulated by the Financial Conduct Authority in the United Kingdom.

Further information You can find more information about Plus500 and our products at www.plus500.co.uk. You can contact us on our website https://www.plus500.co.uk/Help/ContactUs or by calling +44 (0) 203 808 9577. This document was last updated on 1 August 2018.

Alert
You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?
Type
This document relates to products known as ‘contracts for difference’, which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is a commodity such as Natural Gas or Copper. A commodity is a raw material or primary agricultural product used in commerce.

The commodities on which we currently offer CFDs can be found at: https://www.plus500.co.uk/Instruments#Commodities

Objectives
The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example, if you believe the value of a commodity is going to increase, you would buy a CFD (also known as “going long”) with the intention to sell it at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of a commodity is going to decrease, you would sell a CFD (also known as “going short”) at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs. However, in either circumstance, if the commodity moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position, you are required to deposit into your account a percentage of the total value of the contract. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.

Intended Retail and Elective Professional Investors
Trading these products will not be appropriate for everyone. We would normally expect these products to be utilised by persons to whom some or all of the following criteria apply:

(i) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;
(ii) have ability to bear 100% loss of all funds invested;
(iii) have a high risk tolerance; and
(iv) intend to use the product for short-term investment, speculative trading, portfolio diversification and/or hedging of exposure of an underlying asset.

Terms
CFDs generally have no maturity date or a minimum holding period. You decide when to open and close your position(s).

Most commodity CFDs offered by Plus500 are based on a futures contract and may be subject to an automatic rollover, which consists of the transfer of the previous expired contract to the next without your position(s) closing. After an automatic rollover, any remaining open positions will continue trading on the next contract. Plus500 will make an adjustment to all open position(s) in that particular commodity in order to nullify the difference in rates between the old and new contracts.
You can find the time and date of the upcoming rollover by clicking on the “Details” link on the main trading platform screen next to the instrument’s name.

Moreover, some commodities are not based on a futures contract, and have no rollover date. Such commodities will expire when you choose to exit the contract, or in the event that you do not have available margin.

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close-out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.

What are the risks and what could I get in return?

Summary Risk Indicator (“SRI”)

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above.

You could, therefore, lose your entire investment.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section ‘What happens if Plus500 is unable to pay out’). The indicator shown above does not consider this protection.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any commodity that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying commodity; when you open and close your position; the size of your position (and therefore the margin required subject to margin limits for Commodity CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders.

The table below shows the money you could potentially profit or lose under different scenarios. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying commodities offered for each CFD will have a material impact on the
risk and return of your investment. Specific information on our commodity CFDs is available at: https://www.plus500.co.uk/Instruments#Commodities

For the purpose of this exercise, the price of one barrel of the commodity is $60 and you want to enter into a CFD contract of 25 barrels. 25 barrels x $60 per barrel equals $1,500.

With leveraged trading, you do not need to invest the full $1,500.

With leverage of 1:10, your initial margin requirement for this particular commodity CFD is 10%. You will only have to deposit $150, which is 10% of your notional exposure of $1,500.

The scenarios also assume you do not make any further deposits on your account to meet margin calls.

Note: we charge a daily Overnight Funding Fee in addition to our spread, but there are no other fees. In this example, the daily Overnight Funding fee would be -$0.15 (1 contract x Price of $1,500 x daily Overnight Funding percentage of -0.01%).

<table>
<thead>
<tr>
<th>Notional exposure $1,500</th>
<th>Initial margin $150</th>
<th>Leverage 1:10</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scenarios</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Stress scenario #1:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The sell price falls rapidly through the 50% margin requirement and your position is closed out automatically by the system.</td>
<td>What you will lose after costs and % loss on the initial margin</td>
<td>Closed intra-day at the sell price of $54</td>
</tr>
<tr>
<td><strong>Stress scenario #2:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The sell price falls and your position is closed on margin call.</td>
<td>What you will lose after costs and % loss on the initial margin</td>
<td>Closed intra-day at the sell price of $57</td>
</tr>
<tr>
<td><strong>Unfavourable scenario:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The sell price falls and you close the position.</td>
<td>What you will lose after costs and % loss on the initial margin</td>
<td>Closed on the second day at the sell price of $57.50</td>
</tr>
<tr>
<td><strong>Moderate scenario:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The sell price falls and you close the position.</td>
<td>What you will lose after costs and % loss on the initial margin</td>
<td>Closed intra-day at the sell price of $59.50</td>
</tr>
<tr>
<td><strong>Favourable scenario:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The sell price increases and you close the position.</td>
<td>What you might get back after costs % return on the initial margin</td>
<td>Closed after 14 days at the sell price of $65</td>
</tr>
</tbody>
</table>

The two stress scenarios above show how a volatile price movement can rapidly lead to losses in these circumstances and will result in a forced close-out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.

The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position.
The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profits and losses will vary depending on how the underlying market performs and how long you keep the position open.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

**Rollover Scenario**

Assuming that the CFD commodity futures contract you are trading is subject to a rollover, when your position reaches its expiry rollover date, it will automatically move to the next futures contract.

For the purpose of this exercise you buy 25 barrels at $60 and the contract rolls over. At expiry the last Sell price of the current contract is $62, while the new contract’s Sell price is now at $64. This means that your open position is now valued $50 higher (64-62)* 25= $50. An adjustment of -$50 will then be deducted from your account to reflect the difference between the price of the previous contract and the price of the new contract.

**What happens if Plus500 is unable to pay out?**

If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See [www.fscs.org.uk](http://www.fscs.org.uk).

**What are the costs?**

This table shows the different types of costs involved when you trade CFD products. See [https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees](https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees).

<table>
<thead>
<tr>
<th>One-off costs</th>
<th>Spread</th>
<th>The spread is the difference between the buy (offer) and sell (bid) price that we quote. For example, if the underlying asset is trading at $59.75, our offer price (the price at which you can buy) might be $60 and our bid price (the price at which you can sell) might be $59.50.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ongoing costs</td>
<td>Overnight funding fees</td>
<td>An overnight funding fee is either added to or subtracted from your account whenever a position is left open after a certain cut-off time (the “Overnight Funding Time”). The Overnight Funding percentage and time are found in the instrument's details. The formula used to calculate the daily overnight funding fee of a position is: Trade size x Opening Price x Daily (Buy or Sell) Overnight Funding %. For example, Trade size is 25, Opening Price is $60, Daily Buy Overnight Funding % is -0.01% then the fee will be 25<em>60</em>0.01% = 0.15.</td>
</tr>
<tr>
<td>Other costs</td>
<td>Guaranteed Stop Order</td>
<td>If you choose this feature, please note that as it guarantees that your position (trade) closes at a specific requested rate (price), the trade is subject to a wider spread. For more information, please refer to our FAQ topic <a href="https://www.plus500.co.uk/FAQ/Trading/WhatIsGuaranteedStopOrder">https://www.plus500.co.uk/FAQ/Trading/WhatIsGuaranteedStopOrder</a> Following the example above, assume the Buy/Sell rates for the CFD contract are: 60/59.50. You buy 25 contracts at $60 and you place a Guaranteed Stop Order at the Sell price of $58. The Guaranteed Stop Order fee (applied via wider spread) is $18.75. The Sell price suddenly drops to $57 which means the position will be closed out at $58 and not $57. P&amp;L with Guaranteed Stop = (Sell Rate - Buy Rate) * Contract Size - Guaranteed Stop fee. P&amp;L with Guaranteed Stop = (58-60) * 25 - 18.75 = - $68.75 P&amp;L without Guaranteed Stop = (57-60) * 25 = - $75</td>
</tr>
<tr>
<td>Inactivity Fee</td>
<td>A fee of up to $10 (or equivalent) may be payable by you if there is no login detected on your account for a period of at least three months. This fee will continue to be charged monthly as long as there is no login detected on your account. This is to offset the cost incurred in making the service available, even though it has not been used. However, please note that the fee is only collected from the Real Money account and only when there are sufficient available funds in the account. In order to avoid this fee, simply log into your trading account from time to time, as this is deemed sufficient activity to prevent a fee from being charged.</td>
<td></td>
</tr>
</tbody>
</table>
The costs will vary depending on the investment options you choose. Specific information can be found at [https://www.plus500.co.uk/Instruments](https://www.plus500.co.uk/Instruments).

<table>
<thead>
<tr>
<th>How long should I hold it and can I take money out early?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Most commodity CFDs offered by Plus500 are based on a futures contract and are thus subject to an automatic rollover, which consists of the transferral of the previous expired contract to the next without your position(s) closing. After an automatic rollover, any remaining open positions will continue trading on the next contract. Plus500 will make an adjustment to all open position(s) in that particular commodity in order to nullify the difference in rates between the old and new contracts. For all futures-based products, you can find the time and date of the upcoming rollover by clicking on the “Details” link on the main trading platform. Moreover, some commodities are not based on a futures contract, and have neither an expiry nor a rollover date. Taking the above into account, your open position(s) will close:</td>
</tr>
<tr>
<td>- when you choose to exit the product by closing the position; or</td>
</tr>
<tr>
<td>- in the event you do not have available margin.</td>
</tr>
<tr>
<td>You should monitor the product to determine an appropriate time to close your position(s), which can be done at any time during the market hours displayed in the “Details” link in the main screen of the trading platform.</td>
</tr>
</tbody>

</table>
**Purpose**

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

**Product**

**Product Name** Contract for difference on a CRYPTOCURRENCY.

**Product manufacturer** Plus500UK Ltd (“Plus500”), authorised and regulated by the Financial Conduct Authority in the United Kingdom.

**Further information** You can find more information about Plus500 and our products at [www.plus500.co.uk](http://www.plus500.co.uk). You can contact us on our website [https://www.plus500.co.uk/Help/ContactUs](https://www.plus500.co.uk/Help/ContactUs) or by calling +44 (0) 203 808 9577. This document was last updated on 1 August 2018.

**Alert**

You are about to purchase a product that is not simple and may be difficult to understand.

**What is this product?**

**Type**

This document relates to products known as ‘contracts for difference’, which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, cryptocurrency and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is a cryptocurrency such as Bitcoin or Ethereum. A cryptocurrency is a virtual currency that is not issued or backed by a central bank or government. The pricing of cryptocurrencies is derived from specific cryptocurrency exchanges and are traded on cryptocurrency exchanges.

The cryptocurrencies we currently offer CFDs on are found at [https://www.plus500.co.uk/Instruments#Crypto](https://www.plus500.co.uk/Instruments#Crypto).

**Objectives**

The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example, if you believe the value of a cryptocurrency is going to increase, you would buy a CFD (also known as “going long”) with the intention to sell it at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of a cryptocurrency is going to decrease, you would sell a CFD (also known as “going short”) at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs. However, in either circumstance, if the cryptocurrency moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position, you are required to deposit into your account a percentage of the total value of the contract. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.

**Intended Retail and Elective Professional Investors**

Trading these products will not be appropriate for everyone. We would normally expect these products to be utilised by persons to whom some or all of the following criteria apply:

- (v) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;
- (vi) have ability to bear 100% loss of all funds invested;
- (vii) have a high risk tolerance; and
- (viii) intend to use the product for short-term investment, speculative trading, portfolio diversification and/or hedging of exposure of an underlying asset.

**Term**

CFDs generally have no maturity date or minimum holding period. You decide when to open and close your position(s).

CFDs on Cryptocurrencies may have an expiry date. Therefore any open positions on CFDs on Cryptocurrencies will close upon the expiry date set for the instrument at the last available price, if they are not closed earlier. You can find out the
expiry date of an instrument by clicking on the ‘Details’ link on the main trading platform screen next to the instrument’s name.

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.

What are the risks and what could I get in return?

Summary Risk Indicator (“SRI”)

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above.

You could, therefore, lose your entire investment.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section ‘What happens if Plus500 is unable to pay out’). The indicator shown above does not consider this protection.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any cryptocurrency that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying cryptocurrency; when you open and close your position; the size of your position (and therefore the margin required, subject to margin limits for Crypto CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders. The table below shows the money you could potentially profit or lose under different scenarios. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying cryptocurrencies offered for each CFD will have a material impact on the risk and return of your investment. Specific information on our cryptocurrency CFD is available at:

https://www.plus500.co.uk/Instruments#Crypto

For the purpose of this exercise, the price of buying one contract of the cryptocurrency is $8,000.00. 0.05 contracts x $8,000.00 equals $400.00.

With leveraged trading, you do not need to invest the full $400.00.
With a leverage of 1:2, your initial margin requirement for this particular cryptocurrency CFD is 50%, you will only have to deposit $200.00 which is 50% of the notional exposure of $400.00, leading to a leveraged exposure of 1:2.

The scenarios also assume you do not make any further deposits on your account to meet margin calls.

Note: we charge a daily Overnight Funding Fee in addition to our spread, but there are no other fees. In this example, the daily Overnight Funding fee would be -$0.20 (0.5 contract x Price of $8,000 x daily Overnight Funding percentage of -0.05%).

</table>
The two stress scenarios above show how a volatile price movement can rapidly lead to losses and in these circumstances can result in a forced close out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However, this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.

The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profits and losses will vary depending on how the underlying market performs and how long you keep the position open.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you get back. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

**Expiry Scenario**

Following the example above, assuming that the CFD cryptocurrency contract reaches its automatic expiry date as defined for the instrument. Then your position will close at the last Sell rate of the contract you are trading.

Assume you buy 1 contract at 10,000 and that the last Sell rate at expiry is 10100. The P&L will be = (Sell Rate - Buy Rate) * Contract Size = (10100-10000) * 1 = $100.

**What happens if Plus500 is unable to pay out?**

If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See [www.fscs.org.uk](http://www.fscs.org.uk).

**What are the costs?**

This table shows the different types of costs involved when you trade CFD products. See [https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees](https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees).

<table>
<thead>
<tr>
<th>One-off costs</th>
<th>Spread</th>
<th>The spread is the difference between the buy (offer) and sell (bid) price that we quote. For example, if the underlying asset is trading at 7,975, our offer price (the price at which you can buy) might be 8,000 and our bid price (the price at which you can sell) might be 7,950.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ongoing costs</td>
<td>Overnight Funding Fee</td>
<td>An overnight funding fee, is either added or subtracted to/from your account whenever a position is left open after a certain cut-off time (the “Overnight Funding Time”). The Overnight Funding percentage and time are found in the instrument’s details. The formula used to calculate the daily Overnight Funding fee of a position is: Trade size x Opening Rate x Daily (Buy or Sell) Overnight Funding % For example Trade size is 0.05, Opening Rate is 8,000, Daily Buy overnight fee % is 0.05% then the fee will be 0.05<em>8000</em>0.05% = 0.20.</td>
</tr>
<tr>
<td>Other costs</td>
<td>Guaranteed Stop Order</td>
<td>If you choose this feature, please note that as it guarantees that your position (trade) closes at a specific requested rate (price), the trade is subject to a wider spread. For more information, please refer to our FAQ topic <a href="https://www.plus500.co.uk/FAQ/Trading/WhatIsGuaranteedStopOrder">https://www.plus500.co.uk/FAQ/Trading/WhatIsGuaranteedStopOrder</a> Following the example above, assume the Buy/Sell rates for the CFD contract are: 8,000/7,950. You Buy 0.1 contract at 8,000 and you place a Guaranteed Stop Order at the Sell rate of 7,070. The Guaranteed Stop Order fee (applied via wider spread) is $5.00. The Sell rate suddenly drops to 7000 which means the position will be closed out at 7,070 and not 7,000. P&amp;L with Guaranteed Stop = (Sell Rate - Buy Rate) * Contract Size - Guaranteed Stop fee. P&amp;L with Guaranteed Stop = (7,070-8,000) * 0.1 - 5 = -$98.00 P&amp;L without Guaranteed Stop = (7,000-8,000) * 0.1 = -$100</td>
</tr>
<tr>
<td>Inactivity Fee</td>
<td>A fee of up to $10 (or equivalent) may be payable by you if there is no login detected on your account for a period of at least three months. This fee will continue to be charged monthly as long as there is no login detected on your account. This is to offset the cost incurred in making the service available, even though it has not been used.</td>
<td></td>
</tr>
</tbody>
</table>
However, please note that the fee is only collected from the Real Money account and only when there are sufficient available funds in the account. In order to avoid this fee, simply log into your trading account from time to time, as this is deemed sufficient activity to prevent a fee from being charged.

The costs will vary depending on the investment options you choose. Specific information can be found at [https://www.plus500.co.uk/Instruments](https://www.plus500.co.uk/Instruments).

---

**How long should I hold it and can I take money out early?**

Certain cryptocurrency CFDs have an expiry date. When the expiry date is reached, all open positions for that cryptocurrency CFD are terminated. Before opening a cryptocurrency CFD position you should make sure you are aware of whether or not the contract expires and, if it does expire, when the expiry date is.

Taking this into account, your open position will close when:

- you choose to exit the product by closing the position; or
- in the event you do not have available margin; or
- with certain cryptocurrency CFDs, when the contract expires.

You should monitor the product to determine when the appropriate time is to exit and, if applicable, when the product expires. You can close your position(s) at any time during market hours, which are displayed in the “Details” link in the main screen of the trading platform.

---

**How can I complain?**

If you wish to make a complaint, you should contact our client services team at disputes@plus500.co.uk. If you do not feel your complaint has been resolved satisfactorily and you are categorised as a Retail Client, you are able to additionally refer your complaint to the Financial Ombudsman Service (FOS). See [www.financial-ombudsman.org.uk](http://www.financial-ombudsman.org.uk) for further information.

---

**Other relevant information**

You will find detailed information on our cryptocurrency CFDs and all our products by reviewing the “Trade” section on the platform or the “All Products List” section in our website  ([https://www.plus500.co.uk/Instruments](https://www.plus500.co.uk/Instruments)). You should ensure that you read the terms of business, summary order execution policy and risk warning notice displayed in the legal section of our website, at [https://www.plus500.co.uk/Help/TermsAndAgreements](https://www.plus500.co.uk/Help/TermsAndAgreements). Such information is also available on request.
# Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

## Product

**Product Name** Contract for difference on an [EXCHANGE TRADED FUND (ETF)](https://www.plus500.co.uk/Instruments#ETFs).

**Product manufacturer** Plus500UK Ltd (“Plus500”), authorised and regulated by the Financial Conduct Authority in the United Kingdom.

**Further information** You can find more information about Plus500 and our products at [www.plus500.co.uk](http://www.plus500.co.uk). You can contact us on our website [https://www.plus500.co.uk/Help/ContactUs](https://www.plus500.co.uk/Help/ContactUs) or by calling +44 (0) 203 808 9577. This document was last updated on 8 October 2018.

## Alert

You are about to purchase a product that is not simple and may be difficult to understand.

## What is this product?

**Type**

This document relates to products known as ‘contracts for difference’, which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is an ETF such as USG-Gas Fund, or an amplified ETF such as FAS.

An ETF (exchange-traded fund) tracks the performance of an index or a commodity, and is traded like a common stock on a stock exchange.

An amplified ETF seeks to amplify the returns of its underlying index for a single day.

The ETFs on which we currently offer CFDs are found at [https://www.plus500.co.uk/Instruments#ETFs](https://www.plus500.co.uk/Instruments#ETFs).

## Objectives

The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example, if you believe the value of an ETF is going to increase, you would buy a CFD (this is also known as “going long”), with the intention to later sell it when it is at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of an ETF is going to decrease, you would sell a CFD (this is also known as “going short”) at a specific value, expecting to later buy it back at a lower price than you previously agreed to sell it for, resulting in us paying you the difference, minus any relevant costs (detailed below). However, in either circumstance, if the ETF price moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position, you are required to deposit a percentage of the total value of the contract in your account. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.

## Intended Retail and Elective Professional Investors

Trading these products will not be appropriate for everyone. We would normally expect these products to be utilised by persons to whom some or all of the following criteria apply:

(i) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;

(ii) have ability to bear 100% loss of all funds invested;

(iii) have a high risk tolerance; and

(iv) intend to use the product for short-term investment, speculative trading, portfolio diversification and/or hedging of exposure of an underlying asset.

## Term

CFDs generally have no maturity date, though specific CFDs may have an expiry date. CFDs do not have a minimum holding period. You decide when to open and close your position(s).

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.
What are the risks and what could I get in return?

Summary Risk Indicator (“SRI”)

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage enables you to open bigger positions using a small amount of capital in your account. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above. You could, therefore, lose your entire investment.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section ‘What happens if Plus500 is unable to pay out’). The indicator shown above does not consider this protection.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any ETF that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying ETF; when you open and close your position; the size of your position (and therefore the margin required subject to margin limits for ETF CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders.

The table below shows the money you could potentially profit or lose under different scenarios. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying ETFs offered for each CFD will have a material impact on the risk and return of your investment. Specific information on our CFDs on ETFs is available at https://www.plus500.co.uk/Instruments#ETFs.

For the purpose of this exercise, the price of one contract of the ETF is $25. 30 contracts x $25.00 per contract equals $750.00

With leveraged trading, you do not need to invest the full $750.

With a leverage of 1:5 your initial margin requirement for this particular ETF CFD is 20%. You will only have to deposit $150 which is 20% of the notional exposure of $750, leading to a leveraged exposure of 1:5.

The scenarios also assume you do not make any further deposits on your account to meet margin calls.

Note: we charge a daily Overnight Funding Fee in addition to our spread, but there are no other fees. In this example, the daily Overnight Funding fee would be -$0.08 (30 contracts x Price of $25 x daily Overnight Funding percentage of -0.01%).

<td>Closed on the second day at the sell price of $23.25</td>
<td></td>
</tr>
<tr>
<td>The sell price falls and you</td>
<td></td>
<td></td>
</tr>
<tr>
<td>close the position.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Moderate scenario:</strong></td>
<td>Closed intra-day at the sell price of $24.50</td>
<td>-$15.00 (-10%)</td>
</tr>
<tr>
<td>The sell price falls and you</td>
<td></td>
<td>-$30.08 (-20.05%)</td>
</tr>
<tr>
<td>close the position.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Favourable scenario:</strong></td>
<td>Closed intra-day at the sell price of $25.50</td>
<td>$29.93 (19.95%)</td>
</tr>
<tr>
<td>The sell price increases and you</td>
<td></td>
<td></td>
</tr>
<tr>
<td>close the position.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The two stress scenarios above show how a volatile price movement can rapidly lead to losses and in these circumstances will result in a forced close out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However, this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.

The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profit and loss will vary depending on how the underlying market performs and how long you keep the position open.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.
What happens if Plus500 is unable to pay out?
If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See [www.fscs.org.uk](http://www.fscs.org.uk).

What are the costs?

This table shows the different types of costs involved when you trade CFD products. See [https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees](https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees).

<table>
<thead>
<tr>
<th>Costs</th>
<th>Spread</th>
<th>Offsetting costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>One-off costs</td>
<td>The spread is the difference between the buy (offer) and sell (bid) price that we quote. For example, if the underlying asset is trading at 24.95, our offer price (the price at which you can buy) might be 25.00 and our bid price (the price at which you can sell) might be 24.90.</td>
<td></td>
</tr>
<tr>
<td>Ongoing costs</td>
<td>An overnight funding fee is either added to or subtracted from your account whenever a position is left open after a certain cut-off time (the “Overnight Funding Time”). The Overnight Funding percentage and time are found in the instrument’s details. The formula used to calculate the daily overnight funding fee of a position is: Trade size x Opening Price x Daily (Buy or Sell) Overnight Funding %. For example Trade size is 30, Opening Price is $25, Daily Buy Overnight Funding % is 0.01% then the fee will be 30<em>25</em>0.01% = $0.08.</td>
<td></td>
</tr>
<tr>
<td>Other costs</td>
<td>If you choose this feature, please note that as it guarantees that your position (trade) closes at a specific requested rate (price), the trade is subject to a wider spread. For more information, please refer to our FAQ topic <a href="https://www.plus500.co.uk/FAQ/Trading/WhatsIsGuaranteedStopOrder">https://www.plus500.co.uk/FAQ/Trading/WhatsIsGuaranteedStopOrder</a>. Following the example above, assume the Buy/Sell rates for the CFD contract are: 25.00 / 24.90. You Buy 1 contract at $25.00 and you place a Guaranteed Stop Order at the Sell price of $15.00. The Guaranteed Stop Order fee (applied via wider spread) is $2.50. The Sell rate suddenly drops to $10.00 which means the position will be closed out at $15.00 and not $10.00. P&amp;L with Guaranteed Stop = (Sell Rate - Buy Rate) x Contract Size - Guaranteed Stop fee. P&amp;L with Guaranteed Stop = (15-25) x 1 - 0.1 = $10.10 P&amp;L without Guaranteed Stop = (10-25) x 1 = $15.00</td>
<td></td>
</tr>
<tr>
<td></td>
<td>A fee of up to $10 (or equivalent) may be payable by you if there is no login detected on your account for a period of at least three months. This fee will continue to be charged monthly as long as there is no login detected on your account. This is to offset the cost incurred in making the service available, even though it has not been used. However, please note that the fee is only collected from the Real Money account and only when there are sufficient available funds in the account. In order to avoid this fee, simply log into your trading account from time to time, as this is deemed sufficient activity to prevent a fee from being charged.</td>
<td></td>
</tr>
</tbody>
</table>

The costs will vary depending on the investment options you choose. Specific information can be found at [https://www.plus500.co.uk/Instruments](https://www.plus500.co.uk/Instruments).

How long should I hold it and can I take money out early?
This product generally has no fixed term and will terminate when you choose to close your position, or in the event you do not have available margin. You should monitor the product to determine when the appropriate time is to close your position(s), which can be done at any time during market hours, as displayed in the “Details” link in the main screen of the trading platform.

How can I complain?
If you wish to make a complaint, you should contact our customer support team at disputes@plus500.co.uk. If you do not feel your complaint has been resolved satisfactorily and are categorised as a Retail Client, you are able to additionally refer your complaint to the Financial Ombudsman Service (FOS). See [www.financial-ombudsman.org.uk](http://www.financial-ombudsman.org.uk) for further information.

Other relevant information
You will find detailed information on our ETF CFDs and all our products by reviewing the “Trade” section on the platform or the “All Products List” section in our website ([https://www.plus500.co.uk/Instruments](https://www.plus500.co.uk/Instruments)). You should ensure that you read the terms of business, summary order execution policy and risk warning notice displayed in the legal section of our website, at [https://www.plus500.co.uk/Help/TermsAndAgreements](https://www.plus500.co.uk/Help/TermsAndAgreements). Such information is also available on request.
FOREX - Key Information Document

Purpose
This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product
Product Name Contract for difference on a CURRENCY PAIR (FX).
Product manufacturer Plus500UK Ltd ("Plus500"), authorised and regulated by the Financial Conduct Authority in the United Kingdom.
Further information You can find more information about Plus500 and our products at www.plus500.co.uk. You can contact us on our website https://www.plus500.co.uk/Help/ContactUs or by calling +44 (0) 203 808 9577. This document was last updated on 1 August 2018.

Alert
You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?
Type
This document relates to products known as 'contracts for difference', which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of rate movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is an FX pair such as GBP/USD or EUR/USD. When referring to CFD Forex trading, we refer to the exchange of one currency for another at an agreed exchange rate.

The currency pairs we currently offer CFDs on are found at https://www.plus500.co.uk/Instruments#Forex.

Objectives
The objective of trading CFDs is to speculate on rate movements (generally over the short term) in an underlying asset. Your return depends on movements in the rate of the underlying asset and the size of your position.

The first currency listed in an FX pair is called the base currency, and the second currency is called the quote currency (each currency pair is listed as a three letter code). The rate of an FX pair is how much one unit of the base currency is worth in the quote currency. If the base currency rises against the quote currency, then a single unit of the base currency will be worth more units of the quote currency and the FX pair’s rate will increase. If it drops, the FX pair’s rate will decrease.

For example, if you believe that the base currency in a pair is likely to strengthen against the quote currency, you would buy a CFD (this is also known as “going long”), with the intention to later sell it when it is at a higher value. The difference between the rate at which you buy and the rate at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you believe that the base currency in a pair is likely to weaken against the quote currency, you would sell a CFD (this is also known as “going short”) at a specific value, expecting to later buy it back at a lower rate than you previously agreed to sell it for, resulting in us paying you the difference, minus any relevant costs (detailed below). However, in either circumstance if the base currency (and therefore the rate of the FX pair) moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position you are required to deposit a percentage of the total value of the contract in your account. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.

Intended Retail and Elective Professional Investors
Trading these products will not be appropriate for everyone. We would normally expect these products to be utilised by persons to whom some or all of the following criteria apply:

(i) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;
(ii) have ability to bear 100% loss of all funds invested;
(iii) have a high risk tolerance; and
(iv) intend to use the product for short-term investment, speculative trading, portfolio diversification and/or hedging of exposure of an underlying asset.

Term
CFDs on FX generally have no maturity date or minimum holding period. You decide when to open and close your position(s).

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.

What are the risks and what could I get in return?

Summary Risk Indicator ("SRI")

<thead>
<tr>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lower risk</td>
<td>Higher risk</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing a small percentage of the notional value of the position, creating a leveraged position. Leverage enables you to open bigger positions using a small amount of capital in your account. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above. You could, therefore, lose your entire investment.

Our CFDs are not listed on any exchange, and the rates and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section 'what happens if Plus500 is unable to pay out'). The indicator shown above does not consider this protection.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any FX pair that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying FX pair; when you open and close your position; the size of your position (and therefore the margin required, subject to margin limits for FX CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders.

The table below shows the money you could potentially profit or lose under different scenarios. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying FX pairs offered for each CFD will have a material impact on the risk and return of your investment. Specific information on our FX CFDs is available at [https://www.plus500.co.uk/Instruments#Forex](https://www.plus500.co.uk/Instruments#Forex).

For the purpose of this exercise, the buy rate of one contract of the FX CFD is 1.1629 and you want to enter into a CFD contract of €4,000. 4000 contracts x 1.1629 per contract equals $4,651.60.

With leveraged trading, you do not need to invest the full $4651.60.

With a leverage of 1:30, your initial margin requirement for this particular FX CFD is 3.33%, you will only have to deposit $154.80 which is 3.33% of the notional exposure of $4651.60, leading to a leveraged exposure of 1:30.

The scenarios also assume that you do not make any further deposits on your account to meet margin calls.
Note: we charge a daily Overnight Funding Fee in addition to our spread, but there are no other fees. In this example, the daily Overnight Funding fee would be \(-0.53\) (4000 contract\(\times\) Price of \$1.1629 \times\) daily Overnight Funding percentage of \(-0.0113\%).

<table>
<thead>
<tr>
<th>Scenarios</th>
<th>What you will lose after costs and % loss on the initial margin</th>
<th>Closed intraday on margin call at sell price of 1.1242</th>
<th>-$154.80 (-100%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stress scenario #1:</td>
<td></td>
<td>Closed intraday at the sell price of 1.14353</td>
<td>-$77.48 (50%)</td>

<td>Closed after seven days at the sell price of 1.1795</td>
<td>$66.40 Profit</td>
</tr>
</tbody>
</table>

The two stress scenarios above show how a volatile price movement can rapidly lead to losses and in these circumstances can result in a forced close out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However, this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.
The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profit and loss will vary depending on how the underlying market performs and how long you keep the position open.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

**What happens if Plus500 is unable to pay out?**

If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See [www.fscs.org.uk](http://www.fscs.org.uk).

**What are the costs?**

This table shows the different types of costs involved when you trade CFD products. See [https://www.plus500.co.uk/FAQ/Trading/DoYouChargeAnyFees](https://www.plus500.co.uk/FAQ/Trading/DoYouChargeAnyFees)

<table>
<thead>
<tr>
<th>One-off costs</th>
<th>Spread</th>
<th>The spread is the difference between the buy (offer) and sell (bid) price that we quote. For example, if the underlying asset is trading at 100, our offer price (the price at which you can buy) might be 101 and our bid price (the price at which you can sell) might be 99.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ongoing costs</td>
<td>Overnight Funding costs</td>
<td>An overnight fee, called “Overnight Funding”, is either added or subtracted to/from your account whenever a position is left open after a certain cut-off time (the “Overnight Funding Time”). The Overnight Funding percentage and time are found in the instrument's details. The formula used to calculate the daily overnight funding fee of a position is: Trade size x Opening Rate x Daily (Buy or Sell) Overnight Funding %. For example, Trade size is 5000, Opening Rate is 1.178, Daily Buy Overnight Funding % is 0.0098% then the fee will be 5000<em>1.178</em>0.0098% = 0.58.</td>
</tr>
<tr>
<td>Other costs</td>
<td>Guaranteed Stop Order</td>
<td>If you choose this feature, please note that as it guarantees that your position (trade) closes at a specific requested rate, the trade is subject to a wider spread. For more information, please refer to our FAQ topic <a href="https://www.plus500.co.uk/FAQ/Trading/WhatIsGuaranteedStopOrder">https://www.plus500.co.uk/FAQ/Trading/WhatIsGuaranteedStopOrder</a>. Following the example above, assume the Buy/Sell rates for the CFD contract are: 1.1629/1.16284. You Buy 4000 contracts at 1.1629 and you place a Guaranteed Stop Order at the Sell rate of 1.1532. The Guaranteed Stop Fee (applied via wider spread) is $0.36. The Sell rate suddenly drops to 1.1450 which means the position will be closed out at 1.1532 and not 1.1450. P&amp;L with Guaranteed Stop = (Sell Rate - Buy Rate) * Contract Size - Guaranteed Stop fee. P&amp;L with Guaranteed Stop = (1.1532-1.1629) * 4000 * 0.36 = - $39.16 P&amp;L without Guaranteed Stop = (1.1450-1.1629) * 4000 = - $71.60</td>
</tr>
<tr>
<td>Inactivity Fee</td>
<td>A fee of up to $10 (or equivalent) may be payable by you if there is no login detected on your account for a period of at least three months. This fee will continue to be charged monthly as long as there is no login detected on your account. This is to offset the cost incurred in making the service available, even though it has not been used. However, please note that the fee is only collected from the Real Money account and only when there are sufficient available funds in the account. In order to avoid this fee, simply log into your trading account from time to time, as this is deemed sufficient activity to prevent a fee from being charged.</td>
<td></td>
</tr>
</tbody>
</table>

The costs will vary depending on the investment options you choose. Specific information can be found at [https://www.plus500.co.uk/Instruments](https://www.plus500.co.uk/Instruments).

**How long should I hold it and can I take money out early?**

This product generally has no fixed term and will expire when you choose to exit the product, or in the event you do not have available margin. You should monitor the product to determine when the appropriate time is to close your position(s), which can be done at any time during market hours, as displayed in the “Details” link in the main screen of the trading platform.

**How can I complain?**
If you wish to make a complaint, you should contact our customer support team at disputes@plus500.co.uk. If you do not feel your complaint has been resolved satisfactorily and are categorised as a Retail Client, you are able to additionally refer your complaint to the Financial Ombudsman Service (FOS). See www.financial-ombudsman.org.uk for further information.

**Other relevant information**

You will find detailed information on our FX CFDs and all our products by reviewing the “Trade” section on the platform or the “All Products List” section in our website https://www.plus500.co.uk/Instruments. You should ensure that you read the terms of business, summary order execution policy and risk warning notice displayed in the legal section of our website, at https://www.plus500.co.uk/Help/TermsAndAgreements. Such information is also available on request.
Purpose
This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product
Product Name Contract for difference on an INDEX.
Product manufacturer Plus500UK Ltd ("Plus500"), authorised and regulated by the Financial Conduct Authority in the United Kingdom.
Further information You can find more information about Plus500 and our products at www.plus500.co.uk. You can contact us on our website https://www.plus500.co.uk/Help/ContactUs or by calling +44 (0) 203 808 9577. This document was last updated on 8 October 2018.

Alert
You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?
Type
This document relates to products known as 'contracts for difference', which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is an index. Plus500 currently offers CFDs on two different types of index: (1) financial indices such as the FTSE 100; and (2) amplified indices.

A financial index is a portfolio of securities used to measure the value of a particular market or a segment of it.

An amplified index reflects a multiple of the daily performance (or a multiple of the percentage change of the value) of the underlying index; the underlying index being a weighted average value of a basket of instruments used to measure and track the weighted value of its components. The underlying index constituents and their weights are selected according to a formula disclosed by the index’s creator, and is usually based on the market capitalisation of the various contributing constituents.

The indices we currently offer CFDs on, together with details of their different instrument properties (such as leverage), can be found at https://www.plus500.co.uk/Instruments#Indices.

Objectives
The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example, if you believe the value of an index is going to increase, you would buy a CFD (also known as “going long”) with the intention to sell it at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of an index is going to decrease, you would sell a CFD (also known as "going short") at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs. However, in either circumstance, if the index moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position, you are required to deposit into your account a percentage of the total value of the contract. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.

Intended Retail and Elective Professional Investors
Trading these products will not be appropriate for everyone. We would normally expect these products to be utilised by persons to whom some or all of the following criteria apply:

(i) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;
(ii) have ability to bear 100% loss of all funds invested;
(iii) have a high risk tolerance; and
Term
CFDs generally have no maturity date or a minimum holding period. You decide when to open and close your position(s). All financial index CFDs offered by Plus500 are based on a futures contract and may be subject to an automatic rollover, which consists of the transfer of the previous expired contract to the next without your position(s) closing. After an automatic rollover, any remaining open positions will continue trading on the next contract. Plus500 will make an adjustment to all open position(s) in that particular index in order to nullify the difference in rates between the old and new contracts. You can find the time and date of the upcoming rollover by clicking on the "Details" link on the main trading platform screen next to the instrument’s name.

CFDs on amplified indices may have an expiry date. Therefore, any open positions on CFDs on amplified indices will close upon the expiry date set for the instrument at the last available price, if they are not closed earlier. You can find out the expiry date of an instrument by clicking on the “Details” link on the main trading platform screen next to the instrument’s name.

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.

What are the risks and what could I get in return?

Summary Risk Indicator (“SRI”)

<table>

<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lower risk</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

There is no recommended or minimum holding period for this product. You must maintain sufficient margin in your account to keep your positions open. Trading on margin means you could quickly lose the amount invested.

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close out one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above. You could, therefore, lose your entire investment.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section ‘What happens if Plus500 is unable to pay out’). The indicator shown above does not consider this protection.

Performance Scenarios
This key information document is not specific to a particular index. It applies to a CFD on any index that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying index; when you open and close your position; the size of your position (and therefore the margin...
required, subject to margin limits for Index CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders.

The table below shows the money you could potentially profit or lose under different scenarios when trading either (1) a financial index CFD; or (2) an amplified index CFD. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying indices offered for each CFD will have a material impact on the risk and return of your investment. Specific information on our indices CFDs is available at: [https://www.plus500.co.uk/Instruments#Indices](https://www.plus500.co.uk/Instruments#Indices).

For the purpose of this exercise, the price of one contract of the index is €3,000.00 and you want to enter into a CFD of one contract. One contract x €3,000.00 equals €3,000.00). With leveraged trading, you do not need to invest the full €3,000.

With a leverage of 1:20, the initial margin for this particular index CFD is 5%. You will have to deposit €150 which is 5% of the notional exposure of €3,000, leading to a leveraged exposure of 1:20.

The scenarios also assume you do not make any further deposits on your account to meet margin calls.

Note: we charge a daily Overnight Funding Fee in addition to our spread, but there are no other fees. In this example, the daily Overnight Funding fee would be -€0.14 (1 contract x Price of $3,000 x daily Overnight Funding percentage of -0.0047%).
The two stress scenarios in the table show how a volatile price movement can rapidly lead to losses and in these circumstances can result in a forced close out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However, this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.

The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profit and loss will vary depending on how the market performs and how long you keep the position open.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

</tr>
</tbody>
</table>

Rollover Scenario
Assume that the index CFD contract you are trading is subject to rollover, when your position reaches its automatic rollover date, it will automatically move to the next futures contract.

For the purpose of this exercise, you buy 1 contract at 3000 and the contract rolls over. If, at rollover, the last Sell rate is 3100 of the current contract, while the new contract’s Sell rate is now at 3150, this means that your open position is now valued €50 higher. \((3150-3100) \times 1 = 50\). An adjustment of €50 will be deducted from your account to reflect the difference between the rate of the previous contract and the rate of the new contract.

The Rollover function is not available for amplified index CFDs.

**Expiry Scenario**

Assume that the amplified index CFD contract reaches its automatic expiry date as defined for the instrument. Then your position will close at the last Sell rate of the contract you are trading.

Following the example above, assume you buy 1 contract at €3000 and that the last Sell price at expiry is €3100. The P&L will be \(= (\text{Sell Rate} - \text{Buy Price}) \times \text{Contract Size} = (3100-3000) \times 1 = €100\).

The Expiry function is not available for financial index CFDs.

**What happens if Plus500 is unable to pay out?**

If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See [www.fscs.org.uk](http://www.fscs.org.uk).

**What are the costs?**

This table shows the different types of costs involved when you trade CFD products. See [https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees](https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees).

</tr>
</tbody>
</table>
The costs will vary depending on the investment options you choose. Specific information can be found at https://www.plus500.co.uk/Instruments.

**How long should I hold it and can I take money out early?**

All financial index CFDs offered by Plus500 are based on a futures contract and may bear thus subject to an automatic rollover, which consists of the transferral of the previous expired contract to the next without your position(s) closing. After an automatic rollover, any remaining open positions will continue trading on the next contract. Plus500 will make an adjustment to all open position(s) in that particular index in order to nullify the difference in rates between the old and new contracts. You can find the time and date of the upcoming rollover by clicking on the “Details” link on the main trading platform.

Taking the above into account, your open position(s) will close:

- when you choose to exit the product by closing the position; or
- in the event you do not have available margin.

Amplified index CFDs may have an expiry date. When the expiry date is reached, all open positions for that index CFD are terminated. Before opening an amplified index CFD position you should make sure you are aware of whether or not the contract expires and, if it does expire, when the expiry date is.

Taking the above into account, your open position(s) will close:

- when you choose to exit the product by closing the position(s); or
- in the event you do not have available margin; or
- with certain amplified index CFDs, when the contract expires.

You should monitor the product to determine an appropriate time to close your position(s), which can be done at any time during the market hours displayed in the “Details” link in the main screen of the trading platform.

If you wish to make a complaint, you should contact our customer support team at disputes@plus500.co.uk. If you do not feel your complaint has been resolved satisfactorily and are categorised as a Retail Client, you are able to additionally refer your complaint to the Financial Ombudsman Service (FOS). See www.financial-ombudsman.org.uk for further information.

**Other relevant information**

You will find detailed information on our Index CFDs and all our products by reviewing the “Trade” section on the platform or the “All Products List” section in our website https://www.plus500.co.uk/Instruments. You should ensure that you read the terms of business, summary order execution policy and risk warning notice displayed in the legal section of our website, at https://www.plus500.co.uk/Help/TermsAndAgreements. Such information is also available on request.
Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product

Product Name Contract for difference on an OPTION.

Product manufacturer Plus500UK Ltd ("Plus500"), authorised and regulated by the Financial Conduct Authority in the United Kingdom.

Further information You can find more information about Plus500 and our products at www.plus500.co.uk. You can contact us on our website https://www.plus500.co.uk/Help/ContactUs or by calling +44 (0) 203 808 9577. This document was last updated on 1 August 2018.

Alert

You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

This document relates to products known as ‘contracts for difference’, which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying asset that you choose is an option on an index such as Germany 30, Netherlands 25, or a stock such as Facebook.

Option CFD rates are determined according to the bid/ask rates which are provided by the exchange on which the options are traded. This means that an “out of money” option (an option with an irrelevant strike price) on the expiry date would still receive bid/ask rates until the expiry date and time.

The Options on which we currently offer CFDs are found at https://www.plus500.co.uk/Instruments#Options.

Objectives

The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example,:

If you believe the value of the underlying asset is going to increase, you would either:

- Buy a Call option CFD with a strike price which is close to the current underlying asset price (also known as “going long”) with the intention to sell it at a higher value. The difference between the price at which you buy and the higher price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below); or
- Sell a Put option CFD with a strike price which is close to the current underlying asset price (also known as “going short”) at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs.

If you think the value of the underlying asset is going to decrease, you would either:

- Sell a Call option CFD with a strike price which is close to the current underlying asset price (also known as “going short”) at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs; or
- Buy a Put option CFD with a strike price which is close to the current underlying asset price (also known as “going long”) with the intention to sell it at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below).

However, in either circumstance, if the option moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position, you are required to deposit into your account a percentage of the total value of the contract. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.
**Intended Retail and Elective Professional Investors**

Trading these products will not be appropriate for everyone. We would normally expect these products to be utilised by persons to whom some or all of the following criteria apply:

- (v) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;
- (vi) have ability to bear 100% loss of all funds invested;
- (vii) have a high risk tolerance; and
- (viii) intend to use the product for short-term investment, speculative trading, portfolio diversification and/or hedging of exposure of an underlying asset.

**Term**

CFDs generally have no maturity date or minimum holding period. You decide when to open and close your position(s).

CFDs on Options have an expiry date. Therefore any open positions on Option CFDs will close upon the expiry date set for the instrument at the last available price, if they are not closed earlier. You can find out the expiry date of an instrument by clicking on the “Details” link on the main trading platform screen next to the instrument’s name.

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.
What are the risks and what could I get in return?

Summary Risk Indicator ("SRI")

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage enables you to open bigger positions using a small amount of capital in your account. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section 'what happens if Plus500 is unable to pay out'). The indicator shown above does not consider this protection.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any option that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying option; when you open and close your position; the size of your position (and therefore the margin required, subject to margin limits for Option CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders.

The table below shows the money you could potentially profit or lose under different scenarios. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying options offered for each CFD will have a material impact on the risk and return of your investment. Specific information on our CFDs on options is available at https://www.plus500.co.uk/Instruments#Options.

For the purpose of this exercise, the buy price of one contract of the Call option is €200 and you want to enter into a CFD contract of 10 options. 10 options x €200.00 per option equals €2,000.00.

With leveraged trading you do not need to invest the full €200.

With a leverage of 1:5 the initial margin requirement for this particular Option CFD is 20%. You will have to deposit €400 which is 20% of your notional exposure of €2,000.

The scenarios also assume you do not make any further deposits on your account to meet margin calls.

There are no overnight funding fees applied to CFDs on options.
The two stress scenarios above show how a volatile price movement can rapidly lead to losses and in these circumstances can result in a forced close out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However, this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.

The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profit and loss will vary depending on how the underlying market performs and how long you keep the position open.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and

**Breakdown:**  
€2,500 Profit  
No Overnight Funding fee  
**Closed after 14 days at the sell price of €450** | **€2,500 (+625%)**  
**Breakdown:**  
€2,500 Profit  
No Overnight Funding fee |
does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

**Expiry Scenario**

Assuming that the CFD options contract reaches its automatic expiry date as defined for the instrument. Then your position will close at the last Sell rate of the contract you are trading.

Following the example above, assume you buy 10 options at €200 and that the last Sell price at expiry is €180. The P&L will be = (Sell Rate - Buy Price) * Contract Size = (180-200) * 10 = -€200

**What happens if Plus500 is unable to pay out?**

If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See [www.fscs.org.uk](http://www.fscs.org.uk).

**What are the costs?**

This table shows the different types of costs involved when you trade CFD products. See [https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees](https://www.plus500.co.uk/FAQ/FeesCharges/DoYouChargeAnyFees).

<table>
<thead>
<tr>
<th>Costs</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>One off costs</strong></td>
<td><strong>Spread</strong>&lt;br&gt;The spread is the difference between the buy (offer) and sell (bid) price that we quote. For example, if the underlying asset is trading at €192, our offer price (the price at which you can buy) might be €200 and our bid price (the price at which you can sell) might be €184. An overnight funding fee is either added or subtracted to/from your account whenever a position is left open after a certain cut-off time (the “Overnight Funding Time”). The Overnight Funding percentage and time are found in the instrument’s details. The formula used to calculate the daily overnight fee of a position is: Trade size x Opening Price x Daily (Buy or Sell) Overnight Funding %. Note that there is no Overnight Funding applied for CFDs on Options. If you choose this feature, please note that as it guarantees that your position (trade) closes at a specific requested rate (price), the trade is subject to a wider spread. For more information, please refer to our FAQ topic <a href="https://www.plus500.co.uk/FAQ/Trading/WhatsGuaranteedStopOrder">https://www.plus500.co.uk/FAQ/Trading/WhatsGuaranteedStopOrder</a> Note that Guaranteed Stop orders are not available for CFDs on Options.</td>
</tr>
<tr>
<td><strong>Ongoing costs</strong></td>
<td><strong>Overnight Funding Fee</strong>&lt;br&gt;A fee of up to $10 (or equivalent) may be payable by you if there is no login detected on your account for a period of at least three months. This fee will continue to be charged monthly as long as there is no login detected on your account. This is to offset the cost incurred in making the service available, even though it has not been used. However, please note that the fee is only collected from the Real Money account and only when there are sufficient available funds in the account. In order to avoid this fee, simply log into your trading account from time to time, as this is deemed sufficient activity to prevent a fee from being charged. The costs will vary depending on the investment options you choose. Specific information can be found at <a href="https://www.plus500.co.uk/Instruments">https://www.plus500.co.uk/Instruments</a>.</td>

**How long should I hold it and can I take money out early?**

This product generally has no fixed term and will expire when you choose to exit the product, or in the event you do not have available margin or when it reaches expiry (as all CFDs on Options have an expiry date).

Taking the above into account, your open position(s) will close:

- when you choose to exit the product by closing the position; or
- in the event you do not have available margin; or
- when the contract expires.

You should monitor the product to determine when the appropriate time is to close your position(s), which can be done at any time during market hours, as displayed in the “Details” link in the main screen of the trading platform.

**How can I complain?**
If you wish to make a complaint, you should contact our customer support team at disputes@plus500.co.uk. If you do not feel your complaint has been resolved satisfactorily and are categorised as a Retail Client, you are able to additionally refer your complaint to the Financial Ombudsman Service (FOS). See www.financial-ombudsman.org.uk for further information.

**Other relevant information**

You will find detailed information on our Option CFDs and all our products by reviewing the “Trade” section on the platform or the “All Products List” section in our website https://www.plus500.co.uk/Instruments. You should ensure that you read the terms of business, summary order execution policy and risk warning notice displayed in the legal section of our website, at https://www.plus500.co.uk/Help/TermsAndAgreements. Such information is also available on request.
### Purpose
This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

### Product
**Product Name** Contract for difference on a [SHARE](#).

**Product manufacturer** Plus500UK Ltd ("Plus500"), authorised and regulated by the Financial Conduct Authority in the United Kingdom.

**Further information** You can find more information about Plus500 and our products at [www.plus500.co.uk](http://www.plus500.co.uk). You can contact us on our website [https://www.plus500.co.uk/Help/ContactUs](https://www.plus500.co.uk/Help/ContactUs) or by calling +44 (0) 203 808 9577. This document was last updated on 1 August 2018.

### Alert
You are about to purchase a product that is not simple and may be difficult to understand.

### What is this product?
**Type**
This document relates to products known as 'contracts for difference', which are also known as [CFDs](#). A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is a share such as Lloyds, Apple or Tesla Motors shares. Shares, also known as stocks or equities, represent units into which a company’s capital is divided for investment and ownership purposes.

The shares we currently offer CFDs on are found at [https://plus500.co.uk/Instruments#Stocks](https://plus500.co.uk/Instruments#Stocks).

**Objectives**
The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example, if you believe the value of a share is going to increase, you would buy a CFD (also known as “going long”) with the intention to sell it at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of a share is going to decrease, you would sell a CFD (also known as “going short”) at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs. However, in either circumstance, if the share moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you could lose your entire investment.

To open a position, you are required to deposit into your account a percentage of the total value of the contract. This is referred to as the initial margin requirement (see further below). Trading on margin can magnify any losses or gains you make.

**Intended Retail and Elective Professional Investors**
Trading these products will not be appropriate for everyone. We would normally expect these products to be used by persons to whom some or all of the following criteria apply:

(i) have experience with, and are comfortable trading on, financial markets and, separately, understand the impact and risks associated with margin trading;

(ii) have ability to bear 100% loss of all funds invested;

(iii) have a high risk tolerance; and

(iv) intend to use the product for short-term investment, speculative trading, portfolio diversification and/or hedging of exposure of an underlying asset.

**Term**
CFDs generally have no maturity date, though specific CFDs may have an expiry date. CFDs do not have a minimum holding period. You decide when to open and close your position(s).

We may close your position(s) without seeking your prior consent if you do not maintain sufficient margin in your account. If the margin amount in your account falls below 50% of the total initial margin required for all the CFDs in your account we must close out one or more of your open positions. We will do this in accordance with our margin close out policy which is for open positions to be automatically and systematically closed by the system, from the smallest position first, until the required 50% maintenance margin level is achieved.
What are the risks and what could I get in return?

Summary Risk Indicator ("SRI")

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. The vast majority of retail clients lose money trading CFD with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage can significantly magnify your gains and losses.

If the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account then we must close one or more of your positions. We will do this in accordance with our margin close-out policy, detailed above. You could, therefore, lose your entire investment.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section 'what happens if Plus500 is unable to pay out'). The indicator shown above does not consider this protection.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any share that we offer on our platform. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying share; when you open and close your position; the size of your position (and therefore the margin required subject to margin limits for Share CFDs for Retail clients); and whether to use any risk management tools we offer such as stop loss orders.

The table below shows the money you could potentially profit or lose under different scenarios. Each of the performance scenarios is based on an account with only one open position. However, each scenario will also be impacted by any other open position(s) you have with us. These underlying shares offered for each CFD will have a material impact on the risk and return of your investment. Specific information on our CFDs on shares is available at [https://plus500.co.uk/Instruments#Stocks](https://plus500.co.uk/Instruments#Stocks).

For the purpose of this exercise, the price of one share is €50 and you want to enter into a CFD contract of 15 shares. 15 shares x €50 per share equals €750.

With leveraged trading, you do not need to invest the full €750.

With a leverage of 1:5, your initial margin requirement for this particular share CFD is 20%. You will have to deposit €150 which is 20% of the notional exposure of €750.

The scenarios also assume you do not make any further deposits on your account to meet margin calls.

Note: we charge a daily Overnight Funding Fee in addition to our spread, but there are no other fees. In this example, the daily Overnight Funding fee would be €0.15 (1 contract x Price of €750 x daily Overnight Funding percentage of -0.02%).

</table>
The two stress scenarios above show how a volatile price movement can rapidly lead to losses in these circumstance and will result in a forced close-out of your position. In the stress scenario #2, we would close your position when the margin in your account falls below 50% of the total initial margin required for all the CFDs in your account. However, this may not be possible in an extreme stress scenario, per scenario #1 where you can lose your entire investment (any cash deposited in your CFD account and any unrealised net profits from any other open positions) due to abnormal market conditions.

The unfavourable scenario shows how, as your account equity nears 50% of the total initial margin required, you close the position.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. Your profit and loss will vary depending on how the underlying market performs and how long you keep the position open. The scenarios do not take into account a situation where we are unable to pay you.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

What happens if Plus500 is unable to pay out?

If Plus500 is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with Plus500. Plus500 segregates your funds from its own money in accordance with the UK FCA’s Client Asset rules. Should segregation fail, your investment is covered by the UK’s Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See www.fscs.org.uk.

<td>Guaranteed Stop Order</td>
<td>If you choose this feature, please note that as it guarantees that your position (trade) closes at a specific requested rate (price), the trade is subject to a wider spread. For more information, please refer to our FAQ topic <a href="https://www.plus500.co.uk/FAQ/Trading/WhatsGuaranteedStopOrder">https://www.plus500.co.uk/FAQ/Trading/WhatsGuaranteedStopOrder</a> Following the example above, assume the Buy/Sell rates for the CFD contract are: 50/49. You Buy 15 shares at €50 and you place a Guaranteed Stop Order at the Sell price of €47. The Guaranteed Stop Order fee (applied via wider spread) is €1. The Sell price suddenly drops to €45 which means the position will be closed out at €47 and not €45. P&amp;L with Guaranteed Stop = (Sell Rate - Buy Rate) * Contract Size - Guaranteed Stop fee. P&amp;L with Guaranteed Stop = (47-50) * 15 - 1 = -€46 P&amp;L without Guaranteed Stop = (45-50) * 15 = -€75</td>
</tr>
<tr>
<td>Inactivity Fee</td>
<td>A fee of up to $10 (or equivalent) may be payable by you if there is no login detected on your account for a period of at least three months. This fee will continue to be charged monthly as long as there is no login detected on your account. This is to offset the cost incurred in making the service available, even though it has not been used. However, please note that the fee is only collected from the Real Money account and only when there are sufficient available funds in the account. In order to avoid this fee, simply log into your trading account from time to time, as this is deemed sufficient activity to prevent a fee from being charged.</td>
<td></td>
</tr>
</tbody>
</table>

The costs will vary depending on the investment options you choose. Specific information can be found at https://www.plus500.co.uk/instruments.
